

ABD Combine Abdominal Pads: Post-Surgery Benefits And Recommended Uses

ABD (Army Battle Dressing) Combine Abdominal Pads are highly absorbent, multi-layered pads designed to protect and cushion surgical sites, absorb drainage, and promote a cleaner healing environment. They are an essential supply for many post-surgical recovery routines, especially for patients with abdominal or large incision sites.

Surgeries Where ABD Combine Abdominal Pads are Recommended:

- Abdominal Surgeries (tummy tuck, hernia repair, exploratory laparotomy)
- C-Section or Other Obstetric Surgeries
- Bariatric or Weight Loss Surgeries (gastric bypass, sleeve gastrectomy)
- Liposuction or Body Contouring Procedures
- Mastectomy or Breast Surgery (to cushion drains or incisions)
- Large Wound or Drain Sites Requiring High Absorbency
- Any procedure with moderate-to-heavy post-surgical drainage

Why Use ABD Combine Abdominal Pads After Surgery?

- Absorbs post-surgical drainage and prevents leakage
- Protects incisions and sutures from irritation

- Reduces the risk of infection by keeping the area dry and clean
- Cushions sensitive areas, improving comfort during movement
- Provides an extra layer of protection under abdominal binders or dressings

How ABD Combine Abdominal Pads Help in Recovery:

- Maintains a cleaner, drier wound environment that supports healing
- Reduces skin irritation from moisture or friction
- Can be used under compression garments or binders without discomfort
- Encourages patient mobility by preventing drainage from soiling clothing or bedding

ABD Combine Abdominal Pads are a simple but essential tool for post-surgical care. Their high absorbency and soft cushioning help protect surgical sites, reduce infection risk, and promote a more comfortable recovery.
